

Data Visualization Nanodegree:

Design a Data Dashboard Final project - by Shashank Salian

Topic: Top Level dashboard for Super Store Dataset

A. Dashboard Link:

https://public.tableau.com/app/profile/shashank.s4018/viz/Superstore_Dashboard_Prototype/Top_Level_Dashboard?publish=yes

B. New Tableau Concept learned and applied:

Parametric fields:

I created a parametric field called **Performance_Metric**:

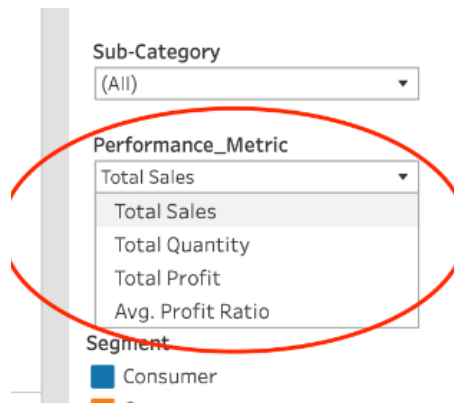

Value	Display As
Sales	Total Sales
Quantity	Total Quantity
Profit	Total Profit
Profit Ratio	Avg. Profit Ratio
Click to add	

Then I created a measured field with the same name i.e. **Performance_Metric** with the calculation logic as follows:

```
if [Parameters].[Performance_Metric] = "Sales" then sum([sales])  
ELSEIF [Parameters].[Performance_Metric] = "Quantity" then sum([Quantity])  
ELSEIF [Parameters].[Performance_Metric] = "Profit" then sum([profit])  
ELSE avg([Profit Ratio]) end
```

Using the above I created a new filter as shown below:

One could also find a discussion thread related to parametric field here:

<https://community.tableau.com/s/question/0D54T00000C5uekSAB/can-we-show-and-select-measures-and-dimension-in-control-box-list-box-or-drop-down-box>

C. How to use filters?

Order Year:

Selecting a year changes the Top-Level performance chart and Sub-category charts. The Year on Year segment performance line chart (bottom left) remains unchanged since it plots across all the years (i.e. 2015,2016,2017,2018) .

Superstore Top Level Dashboard

Top Level Performance

Year on Year Performance per Segment

Data Source: superstore-dataset

Sub-Category Performance per Segment

Performance Metric:

Selecting a performance metric from the dropdown (circled in red below) dynamically updates all the three charts as per the selected performance metric.

Top Level Performance

Year on Year Performance per Segment

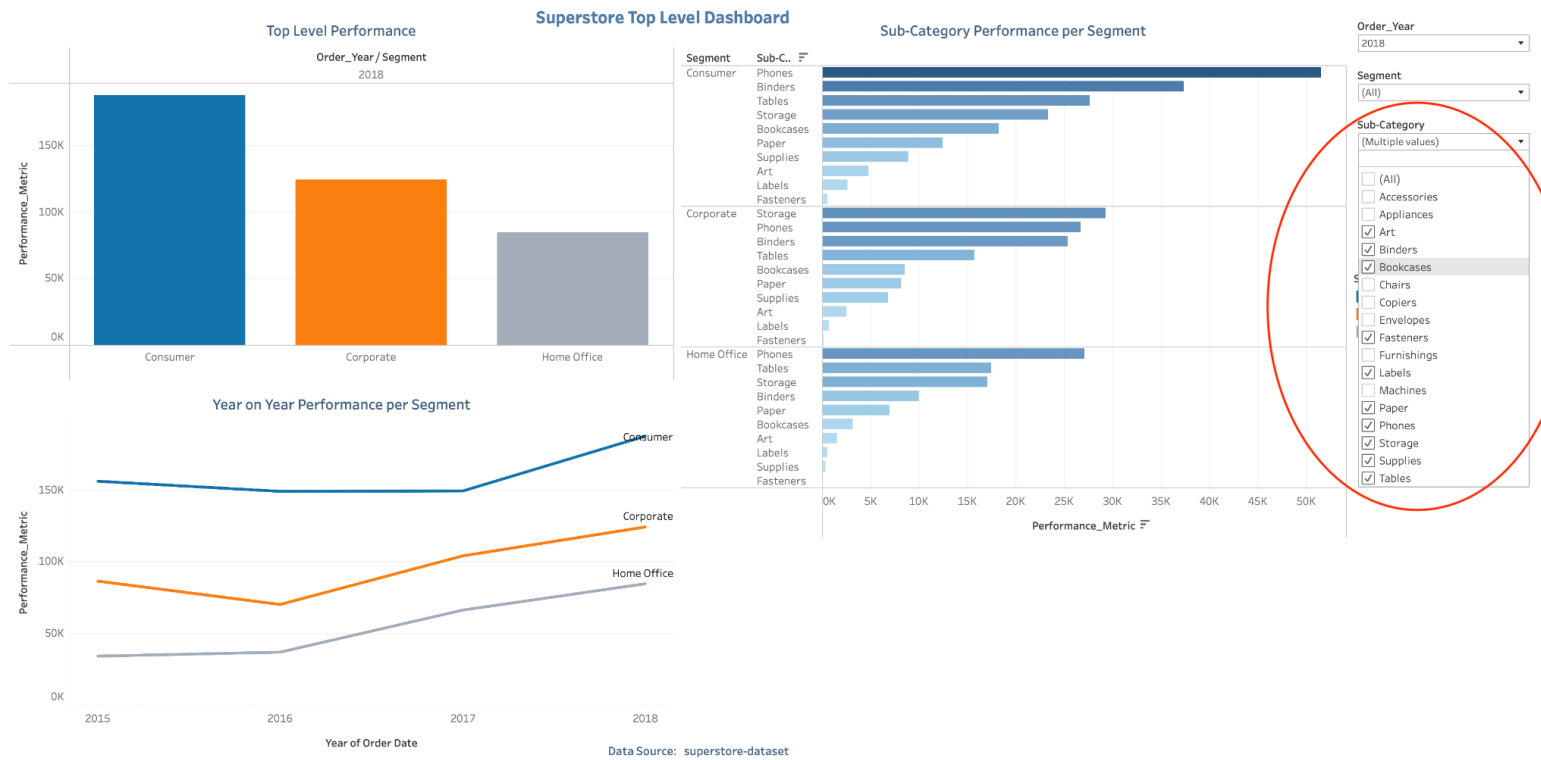

Data Source: superstore-dataset

Sub-Category Performance per Segment

Sub-Category:

Selecting sub-categories updates the metrics in all the three charts based on selected sub-category. (i.e. at sub-category level and also overall segment level).

D. Design Choices:

Colorblind palette:

Superstore Top Level

Visual encodings:

Use of length and shade as encodings to highlight higher performing sub-categories for each segment.

Sub-Category Performance per Segment

Text hierarchy:

Main title and the chart title use same color scheme and title is emphasised with larger font-size.
